

## **Dr. Erica Mallery-Blythe BM (UK Medical Degree)**

Dr. Erica Mallery-Blythe is a Special Expert at the International Commission on Biological Effects of Electromagnetic Fields (ICBE-EMF) and Founder of Physicians' Health Initiative for Radiation and Environment (PHIRE). She is a UK trained medical doctor with a decade of experience within hospital medicine. Emergency trauma medicine was her area of expertise in hospital, and in training for this specialty she has a broad base of medical experience including surgery, anaesthetics, obstetrics, paediatrics and intensive care (both neonatal and adult). She has worked in hospital emergency rooms, led trauma teams, taught on trauma medicine courses throughout the UK and abroad and was selected to instruct doctors on teaching within medicine for Advanced Trauma and Life Support (ATLS).

In 2008, she began researching biological effects of non-ionising radiation with a special interest in Electromagnetic Hypersensitivity (EHS). She has been invited to lecture globally on this issue and discussed the public health issues surrounding non-ionising radiation exposure at the highest political level both in the UK, and in Europe.

She formally transitioned from clinical medicine to full time research in 2015 and founded PHIRE (Physicians' Health Initiative for Radiation and Environment) to facilitate education on a larger scale. The group is currently constructing best practice guidelines for non-ionising radiation (NIR) health safeguarding for multiple settings including hospitals, schools and workspaces.

### **Declarations:**

Special Expert: International Commission on Biological Effects of Electromagnetic Fields (ICBE-EMF)

Founder and Director: Physicians' Health Initiative for Radiation and Environment (PHIRE)

Advisor: Oceania Radiofrequency Scientific Advisory Association (ORSAA)

Advisor: International Guidelines on Non-Ionising Radiation (IGNIR)

Advisor: Electrosensitivity UK (ES-UK)

Honorary Member: British Society for Ecological Medicine (BSEM)
